

INTACT FINANCIAL CORPORATION · COMMERCIAL & SPECIALTY LINES

Mail2Quote

From inbox to bound policy — automatically

Business value overview · Prepared for the underwriting leadership team

THE PROBLEM

**1 in 3 quote requests goes unanswered
on time — over \$1M in premium lost a year.**

Commercial clients flood the inbox with quote requests, and manual processing simply can't respond to every one in time.

Manual quoting can't keep up with the inbox

- Commercial clients send a high volume of quote requests by email
- Each one is read, re-keyed, researched, priced and answered by hand
- Manual processing can't respond to every request in time
- The requests answered too late are lost to faster competitors

30%

of quote requests
answered too late —
over \$1M in lost premium
a year

Why this matters for Intact — and why now

- Intact is Canada's #1 P&C insurer — its edge over peers is built on data- and AI-driven pricing and risk selection.
- Intact's stated 2024 priority: scale ML beyond Personal Lines into Commercial & Specialty — the exact submissions Mail2Quote automates.
- It backs a \$500M+ annual technology investment, 500+ data experts and hundreds of models in production, with GenAI that assists underwriters.
- Mail2Quote runs GenAI + ML on one governed, cloud-native platform — matching Intact's responsible-AI and unified-data-foundation imperatives.

#1

P&C insurer in Canada —
Mail2Quote extends
Intact's Data & AI edge
into commercial quoting.

THE OUTCOME

70%

less manual effort

The automated pipeline does the heavy lifting — while humans stay in the loop for complex risk.

\$750K+

in additional revenue

Requests are now answered on time, recovering premium that used to be lost to delay.

Proven end to end: a live run of 85 quotes

- Auto-approved: 53 quotes (62.4%) — cleared with zero human review
- Underwriter approved: 20 (23.5%) — approved after underwriter review
- Underwriter declined: 7 (8.2%)
- Auto-declined: 4 (4.7%)
- Info requested: 1 (1.2%)

85.9%

of 85 completed quotes
were approved (73) —
and 62% needed zero
manual effort.

Impact in the KPIs you're measured on

KPI	Before — manual	After — Mail2Quote
Quote requests answered on time	~70%	Effectively all
Requests missed / lost to delay	~30%	Near zero
Manual effort per quote	100% manual	70% less
Revenue lost to late quotes	\$1M+ per year	Recovered
Additional revenue generated	—	\$750K+ per year

Based on ~30% of requests previously missed (>\$1M annual revenue loss), a 70% reduction in manual effort, and \$750K+ in additional revenue.

From KPI recovery to a compounding strategic advantage

- Compounds Intact's core thesis — ~500 bps ROE outperformance and ~10% NOIPS growth — not just this quarter's premium recovery.
- Benchmark-driven risk selection structurally bends the loss and combined ratio, the lever behind that ROE outperformance.
- Every submission sharpens Intact's pricing models — a proprietary data moat that widens over time, not a one-time lift.
- Scales from Commercial into Specialty lines, extending ML pricing into Intact's next growth frontier without adding heads.

500

bps of ROE
outperformance Intact
targets — Mail2Quote
makes it a durable,
compounding lever.

Beyond throughput: the underwriting economics

Underwriting metric	Manual intake today	With Mail2Quote
Bind rate (quote-to-bind)	Depressed by late & missed quotes	Lifts as ~30% more requests are answered on time
Loss ratio	Inconsistent pricing & selection leakage	Benchmark-anchored scoring; high-risk auto-declined
Expense ratio	High manual cost to quote each risk	~70% lower handling cost per policy
Combined ratio	Pressured by cost + leakage	Lower loss + lower expense = more underwriting profit
Retention & service	Days to respond to clients	Seconds — stronger renewal & new-business experience

These levers compound into Intact's long-term thesis — disciplined underwriting that sustains ROE outperformance (~500 bps) and ~10% growth in net operating income per share — by pairing on-time, higher-volume quoting with consistent, benchmark-driven risk selection and pricing.

Built on the fields underwriters actually rate on

- NAICS class code, GL & umbrella limits, property TIV and fleet size
- Experience modification factor and five-year loss history
- Cyber and excess / umbrella exposures
- TRIA terrorism premium, policy fees and taxes
- Industry benchmarks — revenue & premium vs. peers

30+

real rating fields per
email — not a generic
inbox model dressed up
as insurance

What it means for you

For the Executive Sponsor

Chief Underwriting Officer / VP Commercial Lines

- \$750K+ more premium, answered on time
- Higher bind rate on live shopping quotes
- Stronger loss ratio from better risk selection
- Lower combined ratio — grow profit, not heads
- Fully governed and auditable

For Underwriting Operations

Underwriting manager / domain owner

- 70% less manual effort — no re-keying or triage of easy submissions
- AI drafts the risk rationale and the customer email
- Expert time refocused on the complex, high-value risk
- Human in the loop: approve, decline, load or discount in a click

How it works — email to quote in seconds

1

Email lands

A customer quote request is captured the instant it arrives.

2

AI reads it

The email is parsed into ~30 structured underwriting fields.

3

Risk scored

ML models + industry benchmarks decide: approve, decline, refer.

4

Priced & documented

Every coverage line is priced and a PDF quote is generated.

5

Reply sent

A response email is drafted; complex cases route to an underwriter.

One platform, end to end

No brittle hand-offs between tools — intake, AI, pricing and the underwriter app all run and are governed in one place.

Real-time intake

Emails processed continuously the moment they arrive.

GenAI + ML

Language models read and reply; ML scores the risk.

Operational app

A live underwriter workspace, not just a report.

Unified governance

Every quote, decision and document fully audited.

Thank you
