

BRICKSHOUSE INSURANCE · COMMERCIAL LINES

Mail2Quote

From inbox to bound policy — automatically

Business value overview · Prepared for the underwriting leadership team

THE PROBLEM

**1 in 3 quote requests goes unanswered
on time — over \$1M in premium lost a year.**

Commercial clients flood the inbox with quote requests, and manual processing simply can't respond to every one in time.

Manual quoting can't keep up with the inbox

- Commercial clients send a high volume of quote requests by email
- Each one is read, re-keyed, researched, priced and answered by hand
- Manual processing can't respond to every request in time
- The requests answered too late are lost to faster competitors

30%

of quote requests
answered too late —
over \$1M in lost premium
a year

THE OUTCOME

70%

less manual effort

The automated pipeline does the heavy lifting — while humans stay in the loop for complex risk.

\$750K+

in additional revenue

Requests are now answered on time, recovering premium that used to be lost to delay.

Impact in the KPIs you're measured on

KPI	Before — manual	After — Mail2Quote
Quote requests answered on time	~70%	Effectively all
Requests missed / lost to delay	~30%	Near zero
Manual effort per quote	100% manual	70% less
Revenue lost to late quotes	\$1M+ per year	Recovered
Additional revenue generated	—	\$750K+ per year

Based on ~30% of requests previously missed (>\$1M annual revenue loss), a 70% reduction in manual effort, and \$750K+ in additional revenue.

What it means for you

For the Executive Sponsor

Chief Underwriting Officer / VP Commercial Lines

- \$750K+ in additional revenue from requests now answered on time
- Recover premium lost to the ~30% of quotes previously missed
- Grow written premium without adding headcount
- Fully governed and auditable — every decision traceable

For Underwriting Operations

Underwriting manager / domain owner

- 70% less manual effort — no re-keying or triage of easy submissions
- AI drafts the risk rationale and the customer email
- Expert time refocused on the complex, high-value risk
- Human in the loop: approve, decline, load or discount in a click

How it works — email to quote in seconds

1

Email lands

A customer quote request is captured the instant it arrives.

2

AI reads it

The email is parsed into ~30 structured underwriting fields.

3

Risk scored

ML models + industry benchmarks decide: approve, decline, refer.

4

Priced & documented

Every coverage line is priced and a PDF quote is generated.

5

Reply sent

A response email is drafted; complex cases route to an underwriter.

One platform, end to end

No brittle hand-offs between tools — intake, AI, pricing and the underwriter app all run and are governed in one place.

Real-time intake

Emails processed continuously the moment they arrive.

GenAI + ML

Language models read and reply; ML scores the risk.

Operational app

A live underwriter workspace, not just a report.

Unified governance

Every quote, decision and document fully audited.

Thank you
